Date	New Features Implemented	Enhancements	Defects Fixed
2025/03/18	1. Implemented a dynamic panel members section. 2. Added functionality to add and delete panel members. 3. Created a structured panel feedback section.	1. Properly aligned date input using flexbox. 2. Set up backend logic in Flask to store panel members in a session	1. Fixed panel member fields not displaying when empty. 2.Resolved installation & setup issues with Varun's repo.
2025/03/19	1. Implemented storing both name and email for panel members. 2. Created a separate Member Panel database and linked it to Interview1 database.	1. Added panel member feedback functionality.	1. Fixed panel member data not storing properly. 2. Fixed data structure issue for panel members (storing names/emails separately).
2025/03/20	No new features added.	1. Ensured name and email are stored separately for future email communication.	1. Fixed row-wise alignment issue.
2025/03/21	1. Integrated EmailJS for sending emails.	None	None

2025/03/22	1. Extended email functionality to include panel members in CC.	1.Debugged and ensured emails trigger correctly from the frontend.	1. Fixed emails not triggering from the frontend submit button. 2. Fixed email functionality initially limited to admins (added CC for panel members).
2025/03/23	**Sunday**		
2025/03/24	None	1.Successfully added email functionality to all relevant pages. 2.No need to refresh; all actions reflect dynamically.	1.Fixed issue where panel members only appeared after a page refresh. Now updates dynamically. 2.Previously, selecting a newly added panel member didn't work immediately. Now, checkboxes correctly reflect selection without needing a refresh. 3.Ensured feedback fields show up properly when a panel member is selected.
2025/03/25	Updated EmailJS Template Format to ensure proper email structure and dynamic data integration. Added Toggle Functionality for the arrow icon to indicate upward/downward movement dynamically. Implemented Field Validation to ensure that all required fields are filled before allowing form submission.	Improved CSS Styling for better UI alignment and user experience. Refined Dropdown Behavior to match the parent input field width correctly. Enhanced Form Submission Flow by dynamically enabling/disabling the submit button based on validation.	None
